

Veloura Restaurant Website - Project Summary

Veloura Restaurant Website

Veloura is a modern and responsive restaurant website built using HTML, CSS, and JavaScript. The project was designed with a clean dark theme, smooth layout, and elegant UI to create a premium dining experience online.

The website includes sections like a hero banner, about section, food menu, chef introduction, gallery, testimonials, and a reservation form. It is fully responsive and works smoothly across desktop, tablet, and mobile devices.

The design was inspired by modern restaurant websites, luxury dining brands, and current UI/UX trends such as glassmorphism navigation bars, dark elegant layouts, hover animations, and card-based menu designs. Food and restaurant images used in the project are referenced from free Unsplash images for educational and design practice purposes.

This project was created as a frontend UI redesign practice project to improve skills in responsive web design, layout creation, and modern user interface styling using pure HTML, CSS, and JavaScript.
